Patent No. 6455292

GRNERAL INFORMATION:

APPLICANT: OriGene Technologies

TITLE OF INVENTION: Full-Length Serine Protein Kinase in Brain and Pancreas TITLE OF INVENTION: Full-Length Serine Protein Kinase in Brain and Pancreas CURRENT PILINE DATE: 2001-08-16

NUMBER OF SEQ ID NOS: 18

SOFTWARE: Patentin version 3.0

SEQ ID NO. 1

Sequence 3, Application US/10003690

Sequence 3, Application US/10003690

Patent No. 6787345

GENERAL INFORMATION:

APPLICANT: ROTY A.J. Curtis

TITLE OF INVENTION: 55053, A No. 6787345el Human Eukaryotic Kinase

TITLE OF INVENTION: and Uses Therefor

FILE REFERENCE: MNI-206

CURRENT APPLICATION NUMBER: US/10/003,690

CURRENT FILING DATE: 2001-11.15

PRIOR APPLICATION NUMBER: 60/248,893

PRIOR FILING DATE: 2000-11-15

NUMBER OF SEQ ID NOS: 8

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NOS: 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Murine; Lymph node Stromal cell kinase; MLSK-1; autoimmune disorder; wound healing; periodontal disease; inflammatory disease; tumour; infection; allergy; ss. Murine Lymph node Stromal cell kinase 1 coding sequence. Martin U, Anderson DM; ВР. AAC90433 standard; cDNA; 2902 26-MAY-2000; 2000WO-US014696. 99US-0136781P 19-MAR-2001 (first entry) (IMMV) IMMUNEX CORP. Virca GD, WO200073468-A1. 28-MAY-1999; Mus musculus. 07-DEC-2000. AAC90433; Bird TA, AAC90433

Novel murine and human kinase nucleic acids useful for treating inflammations, infections, tumors, allergies, autoimmune diseases, and for stimulating or suppressing immune responses.

WPI; 2001-061546/07. P-PSDB; AAB50056.

Claim 1; Page 86-87; 106pp; English.

The present sequence is the coding sequence for Murine Lymph node Stromal cell kinasa I (MLSK-1). The protein encoded by the present sequence is useful for treating a variety of disorders listed in the disclosure of the specification, including autoimmune disorders, allergic reactions, mayeloid or lymphoid cell deficiencies, wound healing and tissue repair and replacement, burns, incisions and ulcers, periodontal disease, inflammatory diseases, tumoures and bacterial, viral or fungal infection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an AMPK (AMP-activated protein kinase) -related kinase, designated SNARK polypeptides and polynucleotides. SNARK (SNIF/AMP-activated protein kinase) is involved in stress response to glucose deprivation. The polynucleotides are useful for expressing SNARK protein in isolated form or as a protein conjugate. Activation of SNARK stimulates liver CPT-1 thus enhances lipid metabolism in liver cells and in other cell types such as heart and skeletal muscles, as well as increases GLUT-4 and glycogen in muscle. Activation of SNARK is predicted to have insulin-like effects that would enhance the disposal of glucose CC into muscle and reduce plasma glucose for the treatment of diabetes and some type of disorders of lipoprotein production leading to increased come type of disorders of lipoprotein production leading to increased levels of cholesterol or triglycenides. SNARK or its variants may be administered to a subject to treat or prevent a disease associated with decreased expression of SNARK, such as diabetes. SNARK antibodies are cused to modulate SNARK activity either in vivo for therapeutic purposes. SNARK antagonists may be administered to increase fuel production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  glucose uptake and increase levels of blood glucose in a patient g from hypoglycaemia. The present sequence is rat SNARK cDNA

```
The invention describes an isolated 21910, 56634, 55053, 2504, 15977, 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 nucleic acid molecule (1) comprising any one of 40 nucleotide sequences (1). The nucleic acid molecules and polypeptides are useful for diagnosing and treating a subject having a disorder, or a subject at risk of developing a disorder, which is associated with aberrant 21910, 56634, 55053, 2504, 15977, 14760, 25501,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New 21910, 56634, 55053, 2504, 15977, 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 nucleic acid molecules and proteins, useful for treating, e.g. cancer, heart failure and angina.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rudolph-Owen LA;

The present invention relates to the isolation of a novel human protein kinase designated 3700, and the polymucleotide sequence encoding it. The invention also describes the use of a modulator of the activity of protein kinase (PK) 3700 for making a medicament or pharmaceutical composition for modulating the ability of a cell to phosphorylate an amino acid residue of a subservate protein. Modulators of protein kinase 3700 activity are useful for modulating protein phosphorylation, cell signalling, tumourigenesis, mitogenesis, transcription of a gene, and signalling, tumourigenesis, mitogenesis, transcription of a gene, and signalling, tumourigenesis, and signalling across the blood-brain barrier. The polymucleotide and polypeptide molecules for protein kinase parrier. The polymucleotide and polypeptide molecules for protein kinase prognosticating, diagnostic targets and therapeutic agents for prognosticating, diagnostic targets and therapeutic agents for prognosticating, diagnosting, preventing, inhibiting, alleviating, or prognosticating, diagnosting, preventing, inhibiting, alleviating, or curing PK-related disorders and cellular proliferative and/or disorders (e.g. haematopoietic neoplastic disorders, carcinoma, sarcoma, metastatic disorders or leukaemia). The 3700 to polynucleotide sequence can be used to express protein kinase 3700, to detect a genetic alteration in a 3700 gene, in chromosome mapping, for

New 21910, 56634, 55053, 2504, 15977, 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 nucleic acid molecules and proteins, useful for treating, e.g. cancer, failure and angina.

Claim 1; SEQ ID NO 43; 139pp; English

The invention describes an isolated 21910, 56634, 55053, 2504, 15977, 21970, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 nucleic acid molecule (I) comprising any one of 40 nucleotide sequences (I). The nucleic acid molecules and colypeptides are useful for diagnosing and treating a subject having a disorder, which is associated with aberrant 21910, 56634, 55053, 2504, 15977, 14760, 25501, 26733, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, associated with aberrant 21910, 56634, 18610, 33217, 21967, h1983, associated with aberrant 21910, 56634, 18610, 33217, 21967, h1983, associated with aberrant 21910, 56634, 18610, 33217, 21967, h1983, associates, prostate disorders, kidney (renal) disorders, kidney (renal) disorders, kidney (renal) disorders, prostate disorders, kellog disorders, cavarian disorders, pancreatic disorders, testes disorders, candothelial disorders, disorders, cardiovascular disorders, pancreatic disorders, skeletal muscle disorders, disorders, associated with bone metabolism, candothelial cell disorders, liver disorders, viral diseases, pain disorders, metabolic disorders, necrological or central nervous system disorders, metabolic disorders, blood vessel disorders or angiogenic disorders, metabolic disorders, blood vessel disorders or angiogenic disorders, explainties, rheumatoid arthritis, multiple sclerosis, cronce, angina, osteoarthritis, rheumatoid arthritis, multiple sclerosis, cronce, angina, osteoarthritis, rheumatoid arthritis, multiple sclerosis, collibration, growth and division. This sequence encodes a novel human protein of the invention. The sequence encodes a novel human protein of the invention. Soletions of cellular process, e.g. cellular p ftp.seqdata.uspto.gov/sequence.html?DocID=20040058355 electronic format

                                                                                                                                                                                                                                The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition containing PKIN agonist is useful for treating a disease or condition associated with decreased expression of KIN and a composition comprising PKIN and acomposition comprising PKIN and acomposition of pKIN and a composition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The consolers include cancer (Leukaemia, adenocarcinoma, lymphoma, melanoma, myeloma, teratocarcinoma, HodgkiN's disease); immune disease, catheroscierosis, anaemia, allergies, adult respiratory distress syndrome, attendance thyroiditis, gout, bronchitis, Crohn's disease, disease, attendated arthritis, osteoporosis, pancreatitis, psoriasis, Reiter's syndrome, mellitus, nultiple sclerosis, pancreatitis, psoriasis, Reiter's syndrome, costeoathitis, and development disorders (arteriosclerosis, cirrhosis, hepatitis, cushing ssyndrome, hypothyroidism, cerebral palsy, cataracts; cardio vascular disease (arteriovenous fiscula, hypertension, vasculitis, ischaemic heart disease, dhronic bronchitis, lung tumours); lipid disorder (fatty liver, Fabry's disease, Niemann-Pick's disease, humann-Pick's disease, humann-pick's disease, sumann-pick's disease, humann-pick's disease, humann-pick's disease, humann-pick's disease, humann-pick's disease, humann-pick's disease, humann-pick, bruna, compania and in gene therapy. The present sequence is humanner.
                                                                                                         New polypeptides, useful for diagnosing, treating or preventing disorders of growth and development, cardiovascular and lipid, and diseases such as cancer, comprise human kinase polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              217
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            211
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   277
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 271

	RESULT 7 AAK94280 ID AAK94280 standard; cDNA; 3395 BP. XX AC AAK94280; XX DT 06-NOV-2001 (first entry)		PN EP1130034-AZ. XX	XX		P-FSUB; AAM93380. 830 Primers useful for synthesizin genetic manipulation.	XX XX C The invention relates to primers for synthesising full length CDNA C Clones. 830 CDNA molecules encoding a human protein have been isolated C clones. 830 CDNA molecules encoding a human protein have been isolated CC and nucleotide sequences of 5' - and 3'-ends of the cDNA molecules have CC been determined. Primers for synthesising the full length cDNA are useful C for clarifying the function of the protein encoded by the CDNA. The full CC length clones were obtained by construction of full length enriched CDNA CC increase that were synthesised by the oligo-capping method. The primers C mable the production of the full length human cDNA of the CC methods. The present sequence is a full length human cDNA of the CC invention. Note: The sequence data for this patent did not form part of CC the printed specification, but was obtained in CD-ROM format directly CC from EPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                                     ò
                                                                                                                                            à
                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polynucleotide sequence is a full length human cDNA clone of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            211

As such, these compositions can be used for gene therapy purposes to treat diseases or disorders including cancer, immune-related diseases, cardiovascular disease, brain or neuronal associated disease, extending and inflammatory disorders. Accordingly, they exhibit cytostatic, neuroprotective, immunomodulator and antiinflammatory activities. This polynucleotide sequence is a human kinase DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAGATCTGATGCACATACGGAGGGAGAGTTGAGATCATGTCATCACCCTCAACCACCCTCACA

ò

This invention relates to a novel isolated, enriched or purified nucleic acid molecule that encodes a kinase polypeptide. Specifically, it relates to human tyrosine and serine/threonine protein kinases (PTK's and STK's), as well as protein kinase-like enzymes. The present invention describes

(first entry)

The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ1119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegenerative diseases (Parkinson's or Alzheimer's disease), autoinmune diseases (multiple sclerosis, in diabetes, lupus) genetic disorders, myeloid or lymphoid disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published pct sequences
